

You Can Save Your Family's Skin and Respiratory Health, Your Clothing, and R1000s In Annual Laundry Detergent Costs With This Breakthrough Environmental Laundry Product That Really Cleans Your Clothes!

First of all, you need to know that you are not washing your clothes with soaps, and you probably never have in your lifetime. **Detergents are not soaps.** They are **petrochemicals derived from crude oil.**

**Water** is the universal solvent. Water is what ultimately cleans your clothes whether you use laundry detergents, or the Magnetic Laundry System. All these products do is help water to clean *better*.

**The Magnetic Laundry System is a chemical-free, completely renewable** magnetic means of cleaning, unlike detergents which are non-renewable petrochemicals.

**Magnetic** force is one of the most powerful natural forces on earth. In fact, the earth itself is like a giant magnet with a north and south pole. It is an amazing source of natural energy. Even the weak magnets on your refrigerator defy the force of gravity without batteries or being plugged into any power source.

**The Magnetic Laundry System** is simply harnessing this amazing force and focusing it in your home washing machine to affect the water.

At an atomic level, *everything* is affected by magnetics. All you need to do it try is for yourself and see the results with your own eyes.

- **COMPLETELY REUSABLE!** One package of two Laundry System units can be used over and over again and even comes with a Manufacturer's **Lifetime Warranty!**
- **POWERFUL & EFFECTIVE! Detergent-Free Cleaning Action.** Economical, Environmentally Safe and Very Easy To Use!
- **CHEMICAL-FREE! Great for infants, children and people with chemical sensitivities and allergies.** Eliminate chemical related health problems by eliminating the chemicals. Get potentially dangerous and toxic chemicals away from your children and pets and out of your home.

- **MAY INCREASE LIFE OF FABRICS! No breakdown in the tensile strength of your fabrics from harsh petrochemicals.** Most people have a significant investment in their wardrobe and your clothes may last longer!
- **MAKE YOUR LIFE EASIER – CONVENIENT AND EASY TO USE! Just place the Laundry System units in your washer and turn it on.** No heavy and expensive detergents to lug from the store, and no more messy petrochemical spills in the kitchen or laundry room.
- **SAVES THE ENVIRONMENT, WATER, MONEY & YOUR HEALTH!** No extra rinse cycle is necessary because there are no chemicals to rinse out. This could save you litres of water with every wash load, the electricity to run the extra cycle, the electricity to heat the water and the added sewer costs! With rising utility, energy and water costs, bypassing the rinse cycle could save you a small fortune.  
You may also find that you do not need softeners or static cling removers because there are no chemicals stiffening your clothing.  
**And most importantly, NO POTENTIALLY TOXIC PETROCHEMICALS RELEASED INTO THE ENVIRONMENT OR ONTO YOUR CLOTHES TO CAUSE HEALTH PROBLEMS!**
- **PATENTED AND INDEPENDENTLY PROVEN!** There is no other non-detergent laundry technology in existence that has two United States Patents (and additional patents pending) and is proven in Independent Laboratory Testing. **You have never seen, heard about or tried anything like it before!**
- **LIFETIME WARRANTY AND UNCONDITIONAL RISK-FREE MONEY BACK GUARANTEE!** If you aren't completely convinced that the Laundry System cleans as good, or better than your favourite laundry detergent, you can send it back for a full product refund! AND it comes with a LIFETIME WARRANTY so you will never need to purchase another system!
- **WILL WORK IN VIRTUALLY ANY TYPE OF HOME (AND LAUNDROMAT) SIZED WASHING MACHINES.** Whether you use a top loader or front loader, plastic water drum, aluminum, stainless steel or other metal, the Laundry System will work in all of them. Just follow the instructions in your laundry system kit for great results!

Life Miracle Laundry System® was designed and engineered to give you many decades of service, and save you thousands of Rands by not having to buy laundry detergents. In the process, you will be preventing thousands of kilograms of chemicals from being dumped into our water supply and from being imbued in your garments, which may create a dramatically positive effect on your family's health if eliminated.

## BENEFITS

- If you or your family suffer from detergent related sensitivities like skin problems and/or respiratory issues, you owe it to your health to switch to a non-chemical alternative product.
- From a financial standpoint, you should be able to save hundreds or thousands of Rands a year on detergents, and even more if you bypass the rinse cycle (which would also save 75 to 150 litres of water per cycle, a significant amount of our natural resource).

- You will save time, reduce your effort with your laundry and avoid lugging boxes, bags or tubs of detergent from the store every time you buy it. As well as minimising your waste going to landfill when purchasing unrecyclable packaging.
- Your wardrobe (which is a considerable investment) may last a lot longer because of the reduction of harsh chemicals.
- It makes your home more “green” and also more child-friendly by reducing the amount of toxins in the home.
- It may have a massive impact on the environment by less chemical dumping, and reducing our dependence on foreign petrochemicals (Detergents are petrochemicals derived from crude oil).
- The most obvious and important fact is that using the Laundry System instead of detergents is preventing petrochemicals from getting dumped into our fresh water supplies, helping to preserve our most valuable natural resource critical for human survival. Less than 1% of the world's water supply is considered drinkable, and preserving the quality of this irreplaceable resource is paramount for human, animal and vegetative life.
- Furthermore, bypassing the rinse cycle can save massive additional water usage (75-150litres of fresh water per load), electricity (derived mostly from burning coal and oil which are big pollutants) and sewage. It also may help reduce the causes of global warming--since such a massive amount of detergents are made and used around the world, significant resources (fossil fuels) are used in its manufacturing and delivery.

## **THE CLEAN FACTOR**

### **MAGNETIC LAUNDRY SYSTEM VERSUS LAUNDRY DETERGENT**

As mentioned detergents are not soap. They are chemical surfactant petrochemicals derived directly from crude oil, and these chemicals are designed to not be completely rinsed out after washing your clothes.

They leave behind what are called “optical brighteners” which are synthetic chemicals that reflect more light off the clothing to appear “brighter” to the eye.

It is believed that adding what are, in effect, chemical mirrors to a garment makes them cleaner. These synthetic chemicals convert UV light wavelengths into visible light, which makes laundered clothes appear whiter (although does not actually affect the cleanliness of the clothing).

They've been found to be toxic to fish and to cause bacterial mutations. Furthermore, they can cause allergic reactions when exposed to skin that is later exposed to sunlight.

In fact, because these chemicals have the possibility of triggering health problems and may cause environmental distress, it is believed that leaving them on the clothing seriously compromises their cleanliness.

Most people aren't even aware that potentially harmful petrochemicals derived from crude oil are constantly on their clothes, possibly causing the wearer skin and respiratory ailments.

The manufacturers of The Magnetic Laundry System define **clean** as chemical-free, non-harmful to the wearer and non-toxic to the environment, in addition to being optically acceptable. But only you, the user and owner of the product can determine that. There are many people that don't want to walk around with petrochemicals and optical brighteners imbued in their clothes all day long.

Although nothing whitens like chlorine bleach, **there are few chemicals that are more toxic** for the environment and health. Bleach is very harsh and damaging to your clothes as well. That said, if you don't mind the tradeoffs, you can still use diluted bleach with Life Miracle Laundry System® if you choose.

A great alternative to chlorine bleach is oxygen bleach. Borax is also an excellent natural laundry booster. Or you can add baking soda (bicarb) or white vinegar to your loads.

Laundry detergent is not used to kill microorganisms, and neither is the Laundry System, but the cleaning process itself washes away most bacteria. However, hot water will kill most microorganisms in the water, and a little bleach will do the same (although bleach works best at high temperatures).

An extremely effective natural alternative is vinegar. Numerous studies show that a straight 5 percent solution of vinegar—such as you can buy in the supermarket—kills 99% of bacteria, 82% of mould, and 80% of germs (viruses).

## **LAUNDRY ENZYME SPRAY**

The Life Miracle Laundry System® is a laundry detergent alternative only. Just like when using laundry detergent, additional products are used for other functions, like spot stain treatments, and whitening bleach products.

We offer a FREE bottle of non-toxic **Laundry Enzymes** that will pre-treat hundreds of tough stains. The enzymes are a natural and non-toxic spot/stain remover like Preen or Vanish which is normally used with detergent. But the enzymes are all-natural and non-toxic.

## **WATER TEMPERATURE**

Generally speaking, hot water is always the best temperature for the cleanest clothes whether you are using the Laundry System or detergent. Think about when you are washing dishes in the sink. The cold water will clean stuck on food, but the hot water will remove the food more quickly and efficiently with less water usage. It is the same in your washing machine.

However, different garments and materials may require that you use lower temperatures, and you may continue to do so. Many customers have reported excellent results using just cold water with the Laundry System. For the reason outlined above, we like to recommend hot water to users – but you ultimately have the freedom to test using the product in a variety of ways, and choose whatever option works best for your personal situation.

Using cold water is obviously better for the environment (less energy is used) but the manufacturers consider the amazing health and environmental benefits of preventing petrochemical detergents from getting dumped into the fresh water supply and onto our skin of far greater significance.

## RETURN ON INVESTMENT

If you spend an average of R50 per month on detergent the product will pay for itself in 12 months and you will save even further on water, electric and sewage costs.

If you spend an average of R100 per month on detergent the product will pay for itself in 6 months. This excluded the additional savings on water, electricity and sewage costs.

## GET GOING

You get two blue magnetic wash balls and an enzyme cleaner with your purchase. The balls will either stick to the drum of your machine or you can place them (individually or together) in a sock if for some reason they don't stick (for example your washing machine drum is plastic).

We suggest that once you get your Magnetic Wash Balls you do a single cycle (without clothing in the machine) with a cup of bicarbonate of soda (baking soda) and a cup of white vinegar to clean out all the residual detergent in your machine.

Thereafter you only need to use the Magnetic Wash Balls in your machine. You can add vinegar and bicarb to your washes to increase the washing power of your water. (You can use detergent (preferably an environmentally friendly one) if you like the smell, but with the balls you'll need a lot less than you normally use.)

Additional Suggestions: (test to see what works for you)

- ½ cup borax/bicarb can be added to take care of tough stains (overalls, grease, children's soiled clothes)
- ½ cup vinegar/lemon juice could be added for extra softening, or to take care of static
- Any other softener/spot remover can be used with the wash balls (preferably eco friendly!)
- Essential oils could be added for a fragrance.

**The fact that you are washing your family's clothes with crude oil-derived petrochemicals may disturb you**, but also visualize what those petrochemicals may be doing to our environment and water supply, in addition to your clothing and your family's delicate skin. And the details of what other ingredients are in detergent is a mystery. They do not disclose ingredients on product labels, so you cannot research them and determine if they are safe for you and your family. **But you should be aware that laundry detergents are listed as "Toxic Substances" by the U.S. Environmental Protection Agency, and many ingredients in laundry detergents may be dangerous and potentially harmful to you and your family.**

**"Chemicals have replaced bacteria and viruses as the main threat to health. The diseases we are beginning to see as the major causes of death in the latter part of (the 20th century) and into the 21st century are diseases of chemical origin."** -- Dr. Dick Irwin, Toxicologist, Texas A&M University

**Thank You For Caring and Thank You For Your Support.** By using this product, you are making the world a better, healthier and cleaner place, and you may be positively impacting the health of your family for years to come. Over many years of use, you will personally prevent flushing thousands of kilograms of synthetic chemicals into our irreplaceable fresh water supply. That is a significant impact that you can very easily make on your own. Every little bit helps, and we will all be working together towards a future where our children and grandchildren will inherit a cleaner and healthier planet.

**Together, we can change the world.**

**Take a step in the green direction – because going green works.**
